QIAGEN QIAcuity - The Future is Digital

A novel fully integrated nanoplate based digital PCR technology combines the power of partitioning with the ease of use of qPCR, making absolute quantification of the rare more accessible.

Webinars on Demand

We understand you may have missed out on some of the webinars in the last few months. Here, we have compiled a selection of seminars from QIAGEN on the latest developments in molecular techniques

FREE SAMPLE

An OPPORTUNITY to try something NEW

A great and risk free way to try a new product. Get a **FREE** sample kit of your choice when you spend a minimum of **MYR2K** on any of the following participating

Key Benefits

- Absolute Target Quantification
- High Tolerance to Inhibitors
- Superior Precision
- Increased Sensitivity
- High Reproducibility

GET YOUR FREE HEALTH CHECK NOW

Maintaining your instrument reliability is critical to the smooth running of your laboratory. During times of crisis where asset budgets are prioritised; maintaining and keeping your laboratory instrument running to prevent major breakdown costs should be top on your list.

Or simply you may just want some help in making a decision to "Repair or Replace".

Our FREE health check provides you with an onsite*** comprehensive diagnostics of your lab instrument and a report to support your operational decisions. ****** Terms & Conditions Apply.**

ASSURING QUALITY IN YOUR TEST RESULTS

Assuring the quality of your laboratory test results is of utmost importance. As increasing numbers of diagnostic methods are made available in the global fight against COVID 19, it is essential that laboratories ensure that their application of methods and subsequent results are reliable and accurate - using external quality assurance tools including Proficiency Testing.

To quote Derek Craston, Chief Scientific Officer, LGC, that 'a bad test is worse than no test' in our fight against the COVID-19 virus emphasise the need for an approach to testing that addresses quality at all levels.

Proficiency Testing is a central component of a robust quality system and enables laboratories to benchmark performance and identify, where appropriate, areas for further improvement.

LGC offers a Proficiency Testing (PT) service for the detection of SARS-CoV-2 (COVID 19) by nucleic acid amplification testing, one of the first global schemes for COVID-19.

In addition, LGC provides a large selection of PT schemes spanning over 13,000 laboratories in more than 160 countries, conducting over 1,700 proficiency tests each year. PT is a requirement for accreditation to ISO/IEC 17025 and ISO 15189.

IMPORTANT RESOURCES

Gas Supply Considerations When Setting Up a GC Instrument for

Analysis

For a gas chromatography (GC) instrument to provide optimum analytical results, it must be maintained and set up correctly for the required analysis.

This article details a step-by-step checklist to ensure a GC instrument is set up correctly. Factors to consider include gas supply, inlet routine maintenance and inspection, column installation, correct column dimensions, and carrier gas types.
